Do you want to be part of the call, or Mel's participatin is good for you? If not, we can push forward a week, but that leaves us less than a week to put presentations together. We can do whatever you think is best. Please advise.

Subject: Cabo Rojo GW Contamination Site

To all:

We finished phase 2 sampling and the analysis should be QA/QC within the next weeks. Denise has a venue for the PAS (the neighbor library) for a tentative week of April 23.

The Head start has decided to move and are arranging funding for this action. They gave us addresses of other Head starts that they run in Cabo Rojo- so far, it appears none are located in our 4 sources areas.

Denise will verify this fact.

We need a conference call after Jill finishes phase 1 health assessment and we can start discussing the health risk message. Of course, if phase 2 is available at the same time then let's discuss a comprehensive health risk approach. Denise and I were thinking the second week of April for this call, please provide your availability to me. I will coordinate the conference call.

Thank you in advance,

Arlene
